# dendrite

v1.1 · vst3 · au · windows · macos

let's look at a sound. there. not there.
give it two tape heads, a dotted ⅛ and a ¼, and it comes back, each time a little further out: inside your head, then around it.
play the same thing too long and it gets an itch.

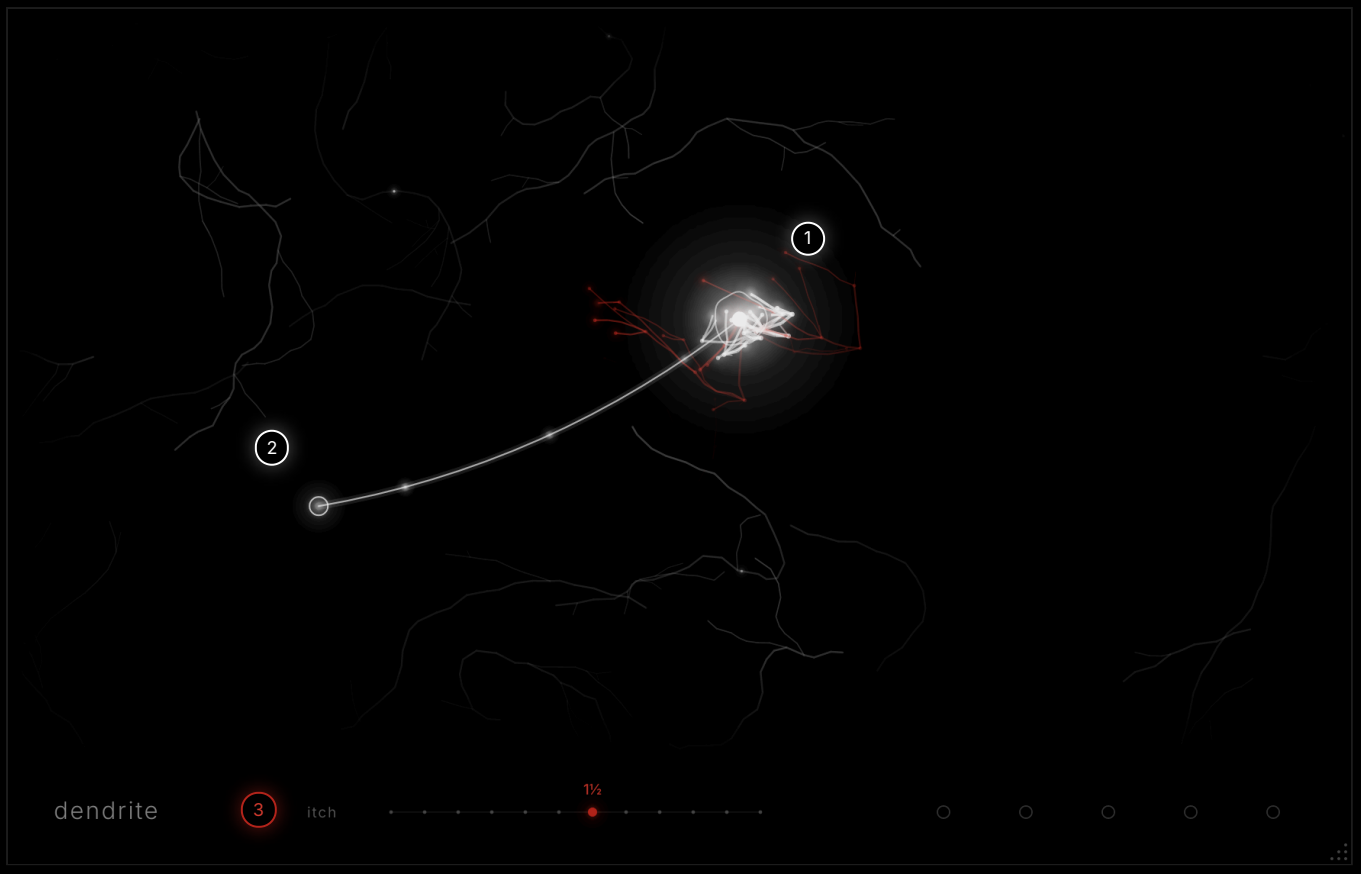

## start

put it on a track. no send. no mix knob.

play. the default already works.

touch the dark on the last hit of a phrase.

now move the light while it plays.

## 1 light

this point is the whole interface. drag it.

**up**, the repeats live longer.
whisper · dub · drown · endless

**right**, they live further away.
inside · around · envelop · beyond

every hit grows a dendrite. young stems follow the light, old ones peel off and die. yours do the same, only smaller.

## 2 throw

**touch the dark and hold.** a nerve runs from your finger to the light, and what is playing is thrown into the echo, louder, off to one side.

**let go.** it falls home over two bars.

light at the bottom: only what you throw gets in. dub engineers call it a closed send.

## 3 itch

how long it can stand the same thing. drag the dots: **¼ bar to 8 bars**, or off.

when bars start to look alike, it takes the loudest hit. three of five heads answer:

| | |
|---|---|
| scream | rises and circles you |
| laugh | ha ha ha, side to side, falling |
| manipulate | a hand on the reel |
| swarm | a dozen grains fall into step |
| ghost | a whisper behind you |

then quiet. on headphones you can point at each one. that's your brain.

## three places to begin

**dub 50 · around 30**
a chord stab. throw the last one.

**drown 70 · envelop 65**
a voice, on headphones. itch off.

**whisper 25 · around 40**
a loop. itch 4. leave it be.

## beneath

each pass loses top and low mids, gains grit, and wobbles with a wow that never repeats.

space only moves the sides, so mono stays a clean dub echo. a scandalous simplification, but true.

## notes

no latency. never louder than what you played into it. bypass fades in 30 ms.

map **throw** to a key: ctrl+k in live.

shift-drag for fine moves. double-click the light: home. the wheel moves it too.
