dendrite

v1.1 · vst3 · au · windows · macos

a dub echo. dotted, in time, safe in mono.
each repeat steps a little further out:
inside your head, then all around it.
repeat yourself too long, and it itches.

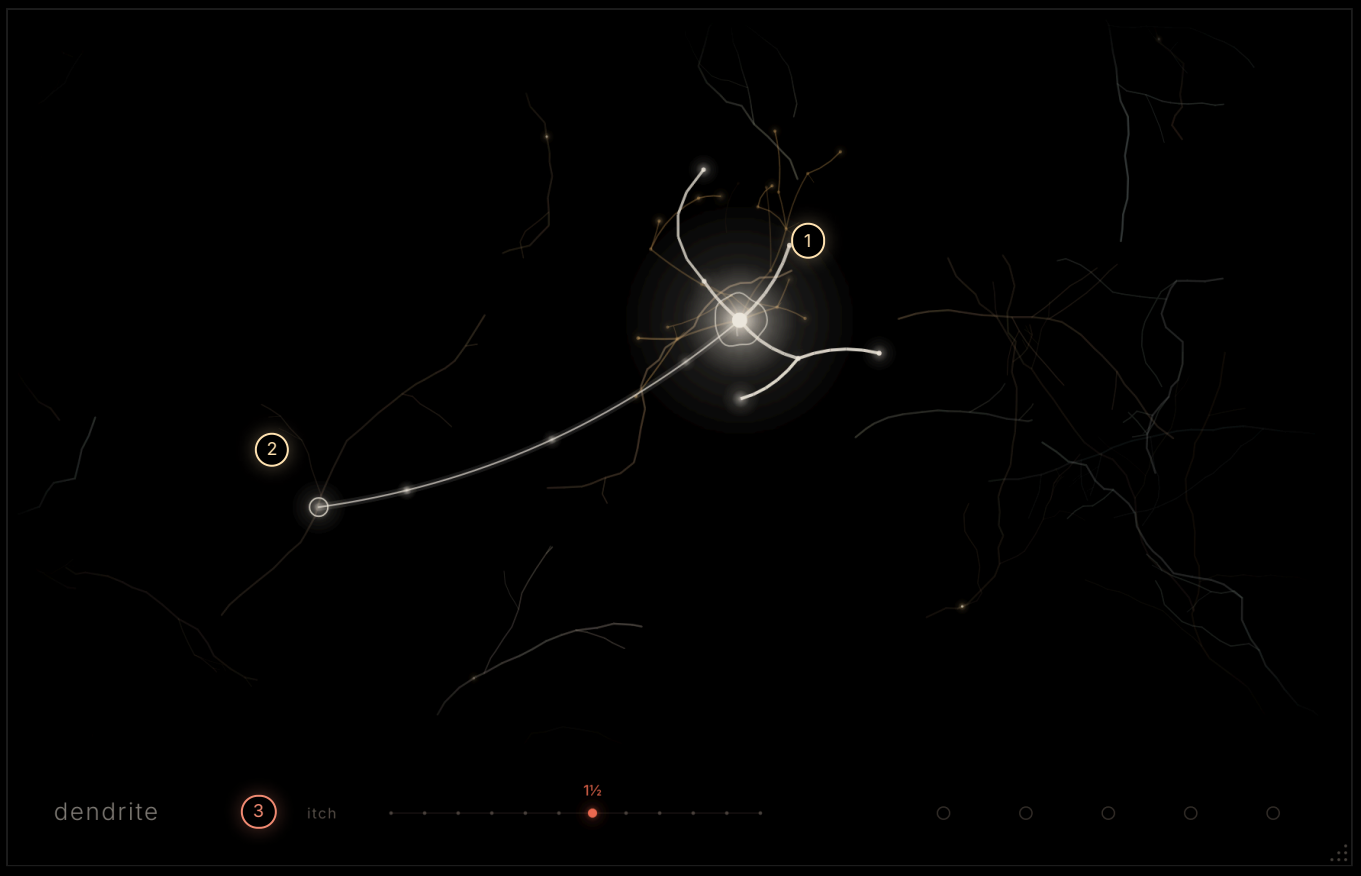

start

put it straight on a track. no send, no mix knob.

play. the default already works.

touch the dark on the last hit of a phrase.

move the light while it plays.

1 light

drag it.

up is how long the repeats live.
whisper · dub · drown · endless

right is where they live.
inside · around · envelop · beyond

every hit grows a dendrite from it. drag, and the young ones follow. the old ones peel off and stay.

2 throw

touch the dark and hold. a nerve runs to the light, and what is playing falls into the echo, louder, off to one side.

let go. it drifts home over two bars.

at the bottom of the light, only what you throw gets in.

3 itch

how long it can stand the same thing. drag the dots: **¼ bar to 8 bars**, or off.

it listens, grows restless, takes the loudest hit. three of five heads answer:

scream	rises and circles you
laugh	ha ha ha, side to side, falling
manipulate	a hand drags the reel
swarm	grains that fall into step
ghost	a whisper behind your head

then quiet. headphones show it best.

---

three places to begin

dub 50 · around 30
a chord stab. throw the last one.

drown 70 · envelop 65
a voice, on headphones. itch off.

whisper 25 · around 40
a loop. itch 4. leave it be.

beneath

two tape heads, the dotted ⅛ and the ¼, in one loop. each pass: less top, thinner lows, a little grit, a wow that never repeats.

space only moves the sides. fold to mono and a clean dub echo stays.

notes

no latency. never louder than what you played into it. bypass fades in 30 ms.

map **throw** to a key: ctrl+k in live.

shift-drag for fine moves. double-click the light: home. the wheel moves it too.
